

Fish Lane Town Square, South Brisbane, QLD

In the inner city suburb of South Brisbane, Brisbane City Council recently undertook plans to redevelop the historic Fish Lane area into a vibrant new public space. The revitalisation has transformed a once overlooked rail underpass into a stunning entertainment and dining area.

Project Design Brief

The project required a new underground cable infrastructure for lighting, power and CCTV and other communications. All manhole covers needed to be locked securely and harmonise with the paver pattern.

ACO's Solution

- **Pavermate®** recessed steel access covers

Benefits

- The 2mm frame edge is visually discreet within the pavement surface
- The cover's recessed deep pan can easily accommodate various pavers
- The cover is secured with four M16 locking bolts

Other ACO products used

- Cable pits ([ACO Cablemate®](#))
