

## Perth Busport, Perth, WA

Perth Busport is an underground bus station in Perth's CBD that operates like an airport with changing gates, to optimize servicing. The Busport is built around an underground lounge of 160 seats, where buses loop around.

### Project Design Brief

With a variety of pavement finishes around various passenger entrances, designers did not want pavement elements to be an eyesore on the new pavements. Additionally new infrastructure was required for additional lighting, communications and CCTV, which required new covers and pits.

### ACO's Solution

- Single part **Rhinocast®** decorative edge recessed access covers

### Benefits

- The infill access covers allow pavers to be installed in them for a harmonious finish with the adjacent pavement
- The 40mm stainless steel decorative edge provides a uniform aesthetic finish
- All covers are designed to meet Class B (AS 3996) for light vehicle traffic

### Other ACO products used

- Trench drainage systems (ACO Drain®)
- Trafficable cable enclosures (ACO Cablemate)
