

Urbanfil®

Salamanca Place, Hobart, TAS

Salamanca Place is located on Hobart's waterfront and has large sandstone warehouses built in the 1800's to service the Port of Hobart where sailors, whalers and workmen frequented. Today the precinct is a vibrant cultural area with bars, cafés, theatres, craft shops and art galleries occupying the historical buildings. The area also has a Saturday street market with busking musicians that are very popular with tourists and locals.

Project Design Brief

Hobart City Council upgraded the pavement in and around Salamanca Place and installed additional lighting, communications and CCTV infrastructure. Designers wanted the new utility enclosures for the electrical infrastructure to be unobtrusive on the new coloured concrete pavement.

ACO's Solution

- Urbanfil® recessed steel access covers

Benefits

- The 2mm cover and frame system is visually discreet in the coloured pavements
- Each cover is infilled with coloured concrete to match the adjacent pavement
- All covers have a polyethylene gas and water seal

Other ACO Products Used

- Trench drains
- Cable pits
