Cairns Esplanade

The Cairns Esplanade is a world class waterfront facility integrating the Cairns Business District and City Port Development into a prestigious gateway to the Barrier Reef. Linked with a mix of spacious promenades and access ways, the development consists of a multi-million upgrade of marine facilities and the creation of an urban waterfront tourism precinct.

ACO Cablemate polymer concrete pits were installed to house the necessary lighting and communications services. As part of the pit system, the designer chose a combination of single and multipart Pavermate covers as the perfect solution providing minimal disruption to the stunning surrounding environment.

Project Details

Client: Cairns City Council
Product Featured: **ACO Access**

Pavermate, single and multipart galvanised steel access covers;
Made to suit paving pattern;
Supplied with brass decorative edging.

Other Products Used
in this Project:
